Crop Shield

The Crop Health Management System is a web-based application designed to help farmers identify and manage crop diseases effectively. The system has two main panels – **Admin** and **Farmer**.

1) The **Admin** panel allows agricultural experts or companies to manage crop-related data, including crop categories, specific crops, their parts (like leaf, trunk), associated diseases, symptoms (with images), and suitable products for treatment. Admins can also view and respond to farmer queries and feedback.

2) The **Farmer** panel allows farmers to register, explore crops by category, identify symptoms based on crop parts, and view recommended products. If unsure, farmers can submit a photo and description of their crop issue. Admins then review these queries and provide personalized suggestions. Farmers can also give feedback on the solutions provided.

This system bridges the gap between farmers and agricultural experts, enabling faster and more accurate crop disease management.

Admin Panel:-

1) Login Master
   - User name
   - Password
   - Email
   - Phone No

2) Company Master
   - Company name
   - Email
   - Phone No
   - Address
   - GST No
